Manchester, UK | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Engineer, Power BI & Microsoft Fabric Specialist with 7+ years of experience delivering cloud-native data platforms, analytics solutions, AI-enabled applications, and enterprise-scale infrastructure. Experienced in designing semantic models, data pipelines, lakehouse architectures, Power BI reporting solutions, and production-grade AI platforms across AWS and Azure ecosystems. Strong background in Python, SQL, Microsoft Fabric, DevOps, Kubernetes, Terraform, and modern data engineering practices.

CORE SKILLS

Data Engineering: Python, SQL, PySpark, Pandas, SQLAlchemy, FastAPI, Data Validation, Unit Testing, ETL/ELT

Microsoft Fabric & Power BI: OneLake, Lakehouse, Warehouse, Fabric Data Factory, Fabric Pipelines, Semantic Models, Real-Time Analytics, Notebooks, Copilot, Power BI, DAX, Power Query, RLS, Governance, Deployment Pipelines

Cloud & Data Platforms: AWS, Azure, S3, Athena, Glue, Lambda, EMR, Redshift, Lake Formation, DynamoDB, Kinesis

Data Architecture: Star Schema, SCD, Medallion Architecture, Data Mesh, Data Warehousing, Data Modelling

DevOps: Terraform, Terragrunt, Kubernetes, Helm, GitHub Actions, GitLab CI, Jenkins

AI & ML: Amazon Bedrock, SageMaker, OpenAI APIs, Vector Databases, RAG, Prompt Engineering, MLOps

s

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Kainos | 2026–Present

- Designed cloud-native AI and data platforms supporting analytics, ML, and enterprise workloads.
- Built scalable data ingestion and processing pipelines using AWS services and Infrastructure as Code.
- Implemented CI/CD, Kubernetes, monitoring, and governance frameworks for production systems.
- Enabled analytics consumption through semantic data layers and reporting integrations.

Solutions Architect | Hexango | 2025–2026

- Architected Foretale.ai, an AI-powered risk and compliance analytics platform.
- Designed real-time data processing solutions, automated compliance workflows, and enterprise reporting capabilities.
- Integrated AI services, vector search, and retrieval-augmented generation for business insights.

AI Infrastructure Engineer | Upwork | 2024–2026

- Delivered production AWS, Kubernetes, and data platform solutions across multiple clients.
- Built scalable MLOps and data engineering pipelines supporting high-volume workloads.
- Automated infrastructure provisioning, deployment, monitoring, and governance.

Perficient – Senior Cloud / Data Engineer

- Designed cloud-native data platforms leveraging AWS services including S3, Glue, Athena, Lambda, Redshift, and Lake Formation.

- Built end-to-end ETL/ELT pipelines using Python, SQL, PySpark, Airflow, dbt, and Azure Data Factory for large-scale analytics workloads.
- Delivered Power BI and Microsoft Fabric solutions including Lakehouse, Semantic Models, Data Factory Pipelines, DAX reporting, Row-Level Security, and enterprise governance frameworks

Tata Consultancy Services (TCS) – Platform Engineer

- Designed and maintained containerized applications on Kubernetes, implementing Helm-based deployments and platform automation.
- Developed scalable data ingestion and integration workflows supporting enterprise reporting and analytics solutions.
- Implemented monitoring, logging, and operational best practices to improve platform reliability and service availability.

Wipro – Cloud & DevOps Engineer

- Implemented Infrastructure as Code using Terraform and automated deployment pipelines using Jenkins and Git-based CI/CD practices.
- Supported AWS cloud migration initiatives, including infrastructure provisioning, monitoring, security controls, and operational automation.
- Built reusable deployment frameworks that reduced manual effort and improved release consistency across multiple environments.

Cognizant – Software Engineer

- Developed and maintained enterprise ETL workflows using SQL and Python to support reporting and operational analytics requirements.
- Designed database objects optimized complex SQL queries, and improved data processing efficiency for business-critical applications.
- Collaborated with cross-functional teams to deliver production support, incident resolution, and application enhancements in Agile environments.

PROJECTS

- Enterprise Lakehouse Platform using Microsoft Fabric, OneLake, Lakehouse, Data Factory, Power BI, and Medallion Architecture.
- Executive Analytics Platform with Power BI dashboards, DAX measures, RLS, semantic models, and governance controls.
- GenAI Knowledge Assistant using Bedrock, OpenAI, Vector Database, RAG, FastAPI, Kubernetes, and Terraform.
- Real-Time Analytics Platform using Kinesis, Lambda, Glue, Fabric Real-Time Analytics, and Power BI.

EDUCATION & CERTIFICATIONS

MSc Cloud Computing (Distinction), University of Leicester

AWS Solutions Architect Associate | Terraform Associate | Databricks Fundamentals | Generative AI Fundamentals | Data Governance & Stewardship Professional
